360i Ready Set Kit

Optimise efficiency during every procedure.

Precision starts with preparation – streamline your fluid management system for sharper performance.

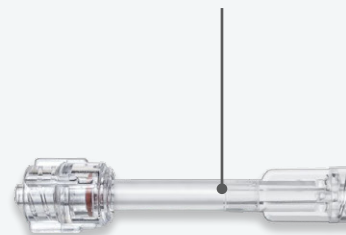

The 360i Kit offers a combination of components that enable you to perform at your best:

- **360° star handle** allows for continuous pressure monitoring with no handle manipulations.
- **2 One-way valves** allows for single-handed contrast aspiration and injection with no handle manipulations.
- **Multiple kitting options available**, customisable to clinical preference, including our Squeeze Contrast Management System – designed to reduce air bubbles and save contrast.

Speak to your Account Manager to understand the full 360i kit portfolio, including custom options.

**Innovation
beyond
automation.**

flexCIL Contrast Injection Line provides flexibility and comes in various lengths to provide a single solution for both femoral and radial access

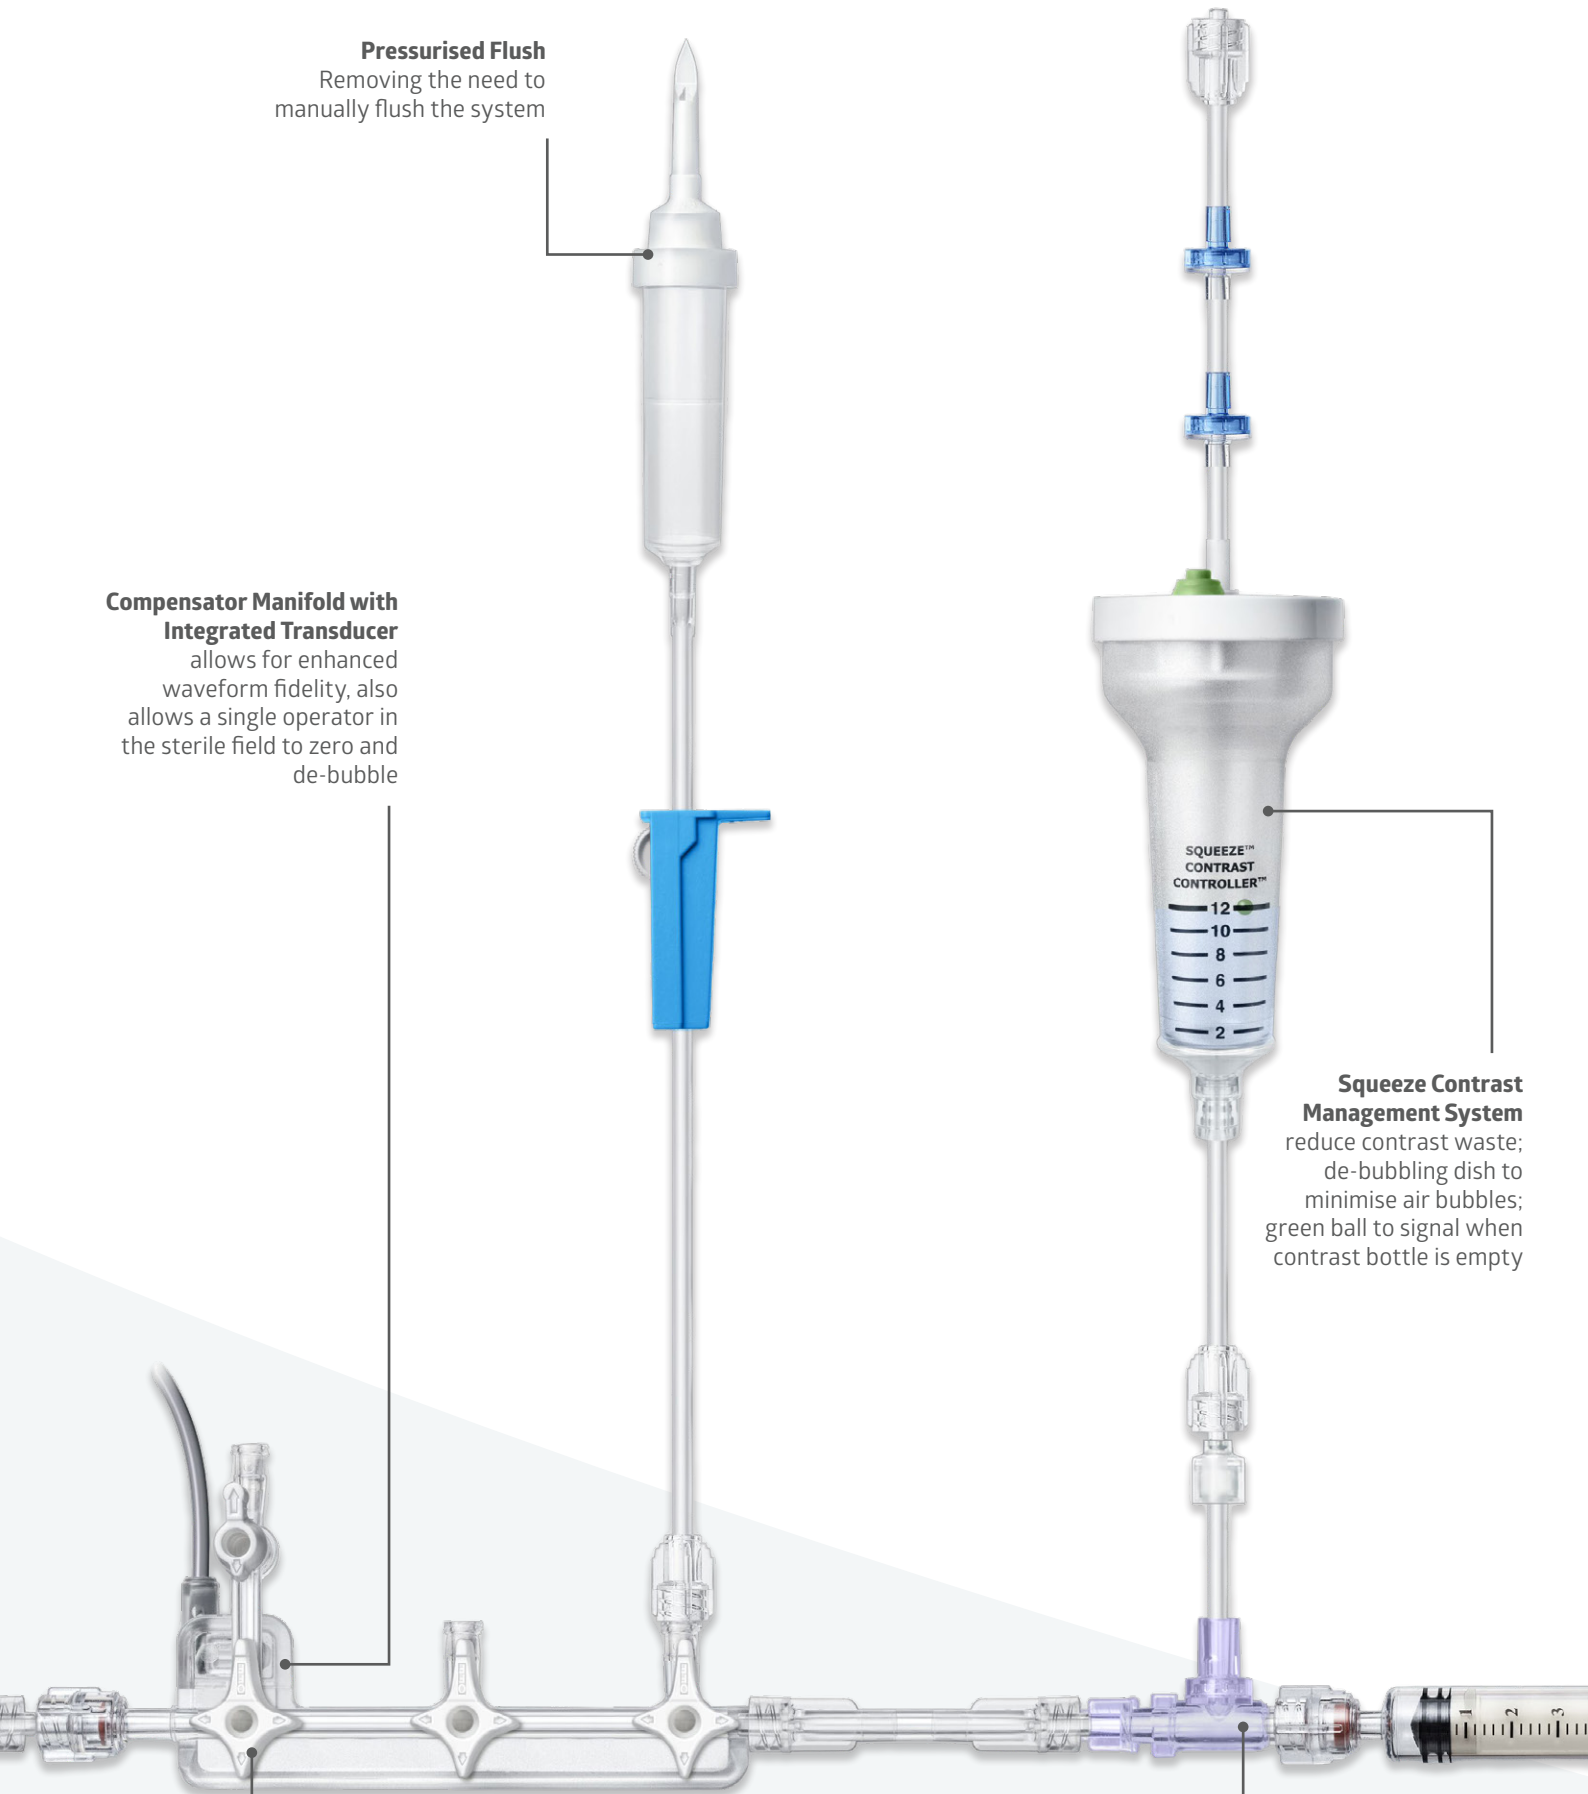

Pressurised Flush
Removing the need to manually flush the system

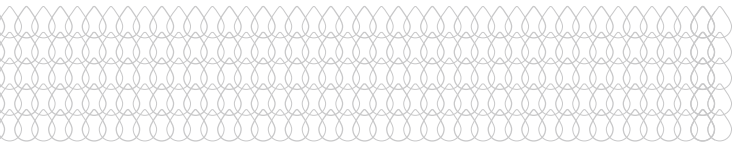

Compensator Manifold with Integrated Transducer
allows for enhanced waveform fidelity, also allows a single operator in the sterile field to zero and de-bubble

Squeeze Contrast Management System
reduce contrast waste;
de-bubbling dish to minimise air bubbles;
green ball to signal when contrast bottle is empty

360° Star Handle
allows for constant haemodynamics during the case - no handle manipulation required!

2 One-Way Valves
decreases handle manipulations and allows for single-hand aspiration and injection
